DASHFOOD

Cafe online ordering system

SE-2622
Artur, Adiyat, Erdaulet
Final ICT Project
8 November 2026

PROBLEM AND USERS

Customers need to see the menu and place an order.

Customers browse, check the cart and track preparation.
Staff receive orders, update status and control availability.

We started with the problem described in Stage 1.
We have not measured queues in a real cafe.

HOW OUR SYSTEM WORKS

Phone or laptop browser

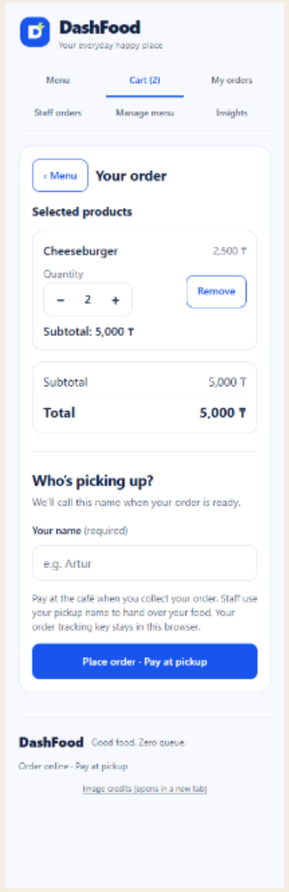

Responsive React web app
Cart and secret order receipts

Wi-Fi / internet / loopback

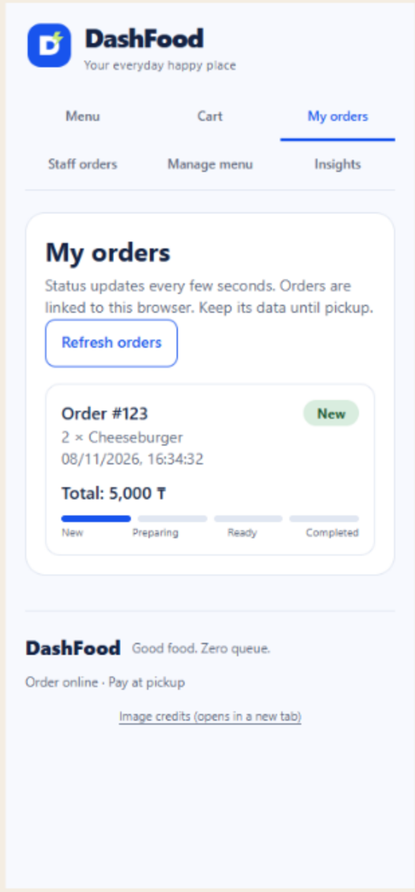

Node HTTPS or Caddy TLS
Express API and PostgreSQL 16

Public: menu and validated checkout
Customer receipt key: own order read
Staff JWT: orders, menu writes, Insights

CUSTOMER DEMO

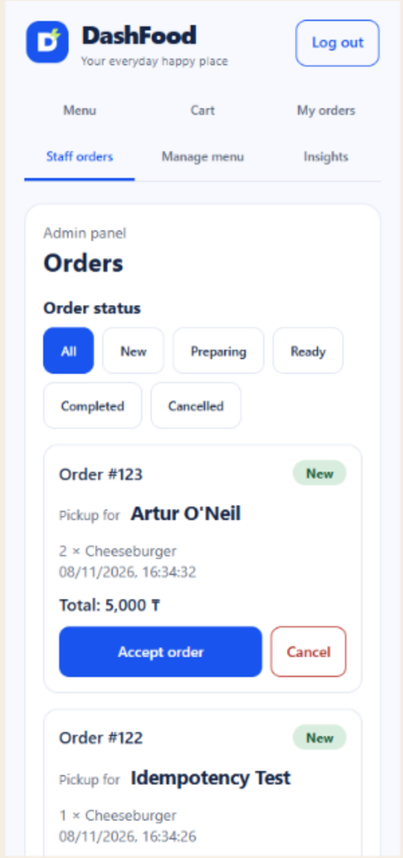

Cart, quantity and pickup name

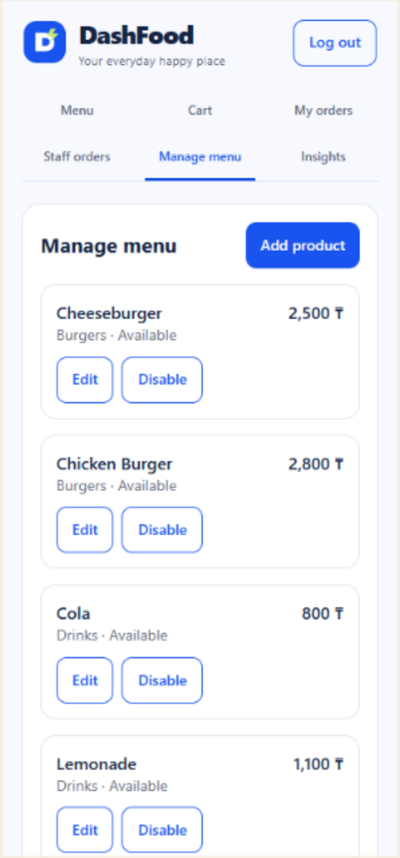

Saved order and tracking status

STAFF DEMO

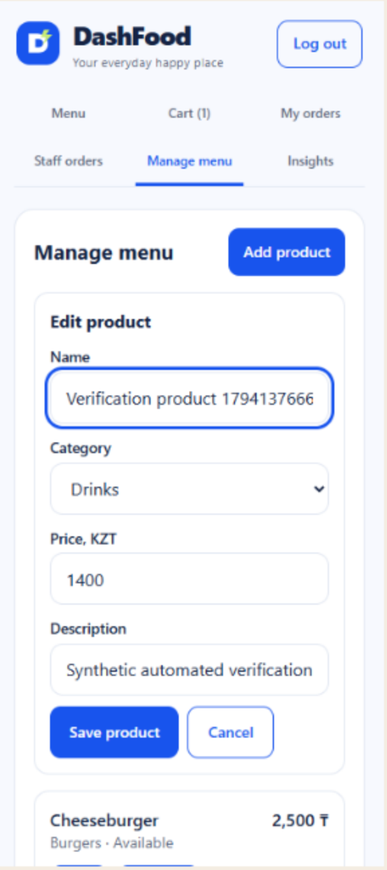

Receive, prepare and mark Ready

Edit products and disable availability

CHANGES AFTER TESTING

F01 All mobile routes remain visible
F02 Search ignores surrounding spaces
F03 Editing opens a visible, focused form

We checked the layout at 320, 360, 375, 768 and 1440px.

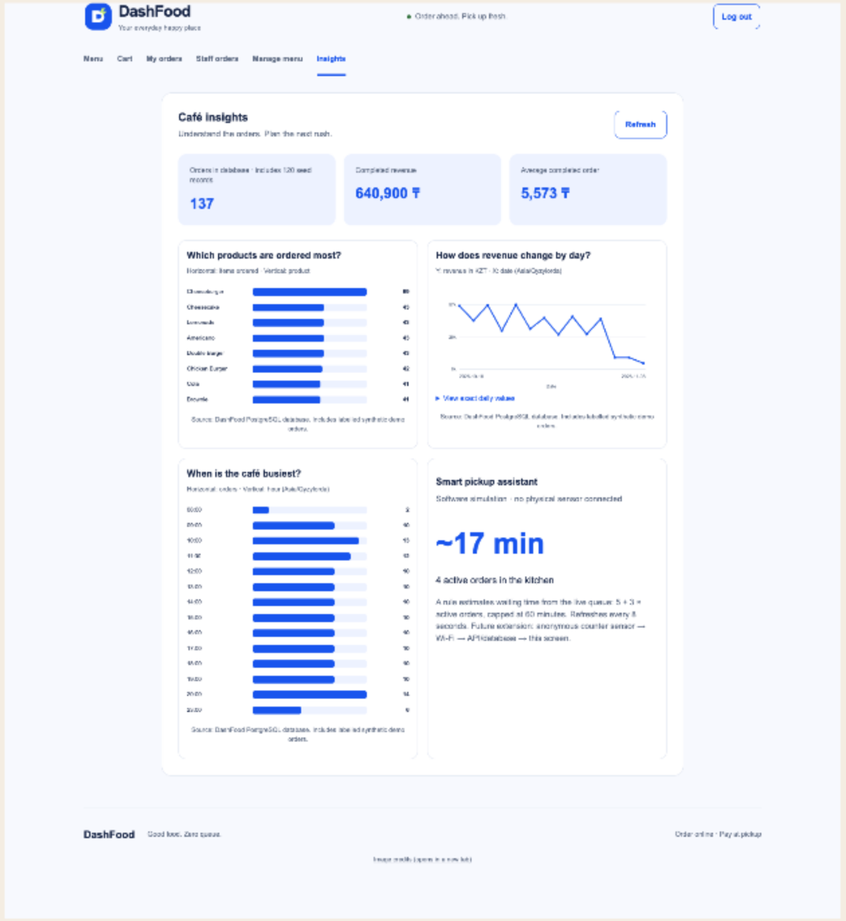

FINAL TESTS

53 API tests passed

Stage 1 goal	Final result	Notes
Order in less than 2 minutes	31s / 24s / 26s	All below 120 seconds
Reject unavailable products	Blocked for all three	Participant reports + API
Interface works at 360px	Browser test passed	User widths not recorded

U1: iPhone / Safari, 31s. U2: Windows / Chrome, 24s.
U3: Android / Chrome, 26s. Mean: 27 seconds.

ORDER DATA

137 orders
120 labelled seed records
640,900 KZT completed total

The charts show popular products, daily revenue and orders by hour. The data was created for testing.

WAITING TIME RULE

min(60, 5 + 3 × active orders)

New and Preparing orders form the active queue.
Insights refreshes every eight seconds.

No physical sensor is connected.
The formula has not been calibrated to kitchen preparation times.

WHAT WE LEARNED AND WHAT IS LEFT

Customers and staff see the same saved order.

Add test dates and screen sizes. Sign each contribution.
Measure availability for a longer period.
Each member commits their own work.
